Business Listing Website - API Routing

1. Authentication Routes (All Users)

POST   /api/register   - Register (User, Client, Admin)

POST   /api/login   - Login and get JWT token

2. User Routes

GET   /api/users/profile   - Get user profile (protected)

POST   /api/users/inquiries   - Send inquiry (protected)

3. Client Routes

GET   /api/clients/profile   - Get client profile (protected)

POST   /api/clients/request   - Request new service (protected)

4. Admin Routes

GET   /api/admin/inquiries   - List all user inquiries

POST   /api/admin/verify-user   - Verify if a user is genuine

POST   /api/admin/approve-service - Approve service request from client

5. General Services Routes

GET   /api/services   - List all services

```
GET    /api/services/:type      - Filter services by type
```

All routes follow REST conventions and use middleware for role-based access.
